We only work very slowly towards effective solutions. 🐢

There is not enough time. I will sue you in court to effect change! 🧑🏻‍⚖️ What are the standing requirements?

**US Courts** @uscourts · Apr 23, 2022

You have to show us that climate change leads to an injury that affects you in a personal and individual way. States have broader standing rights, so consider having a state as the lead party in the litigation. Generally, we open standing to a large number of plaintiffs.

**Dutch Courts** @nlcourts · Apr 23, 2022

We are pretty friendly when granting standing to NGOs in climate litigation. Ensure that you litigate with an NGO whose bylaws include the matter in question. We are not sure whether we can give standing to individual citizens in such matters.

**Australian Courts** @auscourts · Apr 23, 2022

You need to demonstrate a special interest that is more than a general concern and must extend beyond the interest of members of the public in upholding the law. Ideally, you show us your specific and longstanding involvement in climate activism.

**Swiss Courts** @chcourts · Apr 23, 2022

You have to show us that you are particularly affected by global warming, and your rights are affected to a certain extent. We generally believe that the tightening of climate protection measures is a political matter and not for us to decide.

**Climate Activist** @activist · Apr 23, 2022

You can do better than this! Standing seems to be a considerable obstacle for us in all your jurisdictions. However, there appears to be a recent trend of granting standing more often. But you must lower the standing requirements to give us access to justice. It's urgent! 🌱♻️❤️

## **Explanation**

As my dissemination output, I created a Twitter feed. The main aim is to convey the arguments of my essay in lay terms. I chose to create a Twitter feed because it is familiar with and can easily be understood by a non-expert audience. The language of the tweets was deliberately chosen so that laypeople could understand the arguments. Especially the vocabulary used by the climate activist is the same that is often used on social media. The feed summarises all the main arguments of my essay in a simplified way. The emojis make the feed look more vivid and less complicated.
